

Consider concrete to add curb appeal

Continuous concrete landscape borders and lawn irrigation is used to beautify and enhance lawns, gardens, driveways and any landscaped area. Concrete curbing not only looks great, but also functions as a cost-effective, stylish landscape border for any home or business while lawn irrigation keeps the grass green and the flowers blooming.

Yankton Irrigation will install a Rain Bird lawn sprinkler with the quality and pricing that you expect from a small family owned local business. We will repair all brands of lawn sprinklers and keep most parts on hand to give you the prompt and quality service you deserve.

It wasn't that long ago when people would use bricks, or wooden railroad ties to mark the boundaries of their landscaping or gardens in an attempt to prevent erosion and retain soil and mulch. And since then, there have been many, rather dull and ineffective plastic or metal sheet alternatives that have come and gone.

Well, that has all changed in recent years. Now, with the use of continuous concrete curbing, beautifully manicured landscapes with attractive and permanent landscape borders can be seen in neighborhoods across the globe.

We at Custom Curbing Company and Yankton Irrigation are a small family run curbing and irrigation company located in the Yankton, SD area. When you call for information or a free estimate you will talk with an

owner, when we visit about any scope of work it will be with an owner, and when we install the curbing or lawn sprinklers both owners are there, one mixing concrete, laying curbing or digging holes for the lawn sprinkler. Both owners and helpers share all work from mixing concrete to the young lady troweling, cutting seams or filling holes.
